13. ABSTRACT (Maximum 200 words) This report documents the Enhanced Computer Administered Tests (ECAT) database for Keesler AFB (MS), Fort Sill (OK), Fort Knox (KY), and Fort Benning (GA). The report describes the record layouts for all test scores and item responses and item latencies for the ECAT tests. All subjects completed a Pre-Enlistment Paper-and-Pencil Armed Services Vocational Aptitude Battery (PRE-P&P-ASVAB) prior to participating in this study. At the military bases, all subjects completed ECAT in the morning. In addition, RGI Test Administrators (TAs) collected personal data at Keesler AFB from each subject's DD Form 714A or 1966/1. RGI TAs administered more than one version of ECAT. At all sites, TAs began administering Version 2.0, which contains 93 records per case. At Fort Knox, TAs administered Version 2.0 throughout the entire study. Keesler AFB, Fort Sill, and Fort Benning switched to Version 5.0, which contains 97 records per case, on the following dates respectively: 11 March 1991, 03 May 1991, and 06 May 1991.

INTRODUCTION

This report documents the Enhanced Computer Administered Tests (ECAT) data base for Keesler AFB (MS), Fort Sill (OK), Fort Knox (KY), and Fort Benning (GA). Before describing the data files, some introductory comments are in order regarding the experimental groups and test administration procedures.

All subjects completed a Pre-Enlistment Paper-and-Pencil Armed Services Vocational Aptitude Battery (PRE-P&P-ASVAB) prior to participating in this study. At the military bases, all subjects completed ECAT in the morning. In addition, RGI Test Administrators (TAs) collected personal data at Keesler AFB from each subject's DD Form 714A or 1966/1.

RGI TAs administered more than one version of ECAT. At all sites, TAs began administering Version 2.0, which contains 93 records per case. At Fort Knox, TAs administered Version 2.0 throughout the entire study. Keesler AFB, Fort Sill, and Fort Benning switched to Version 5.0, which contains 97 records per case, on the following dates respectively: 11 March 1991, 03 May 1991, and 06 May 1991. Table 1 presents the file names and file descriptions for the data files in this study.

Table 1
Data File Descriptions

File Name ^a	File Description
KEES.MERGE	This file contains 2 lines of Personal data and 97 lines of ECAT data.
KEESERROR.MERGE	Error file for Keesler ECAT 97 merged files.
KEESECAT2.FUL93	Keesler RAW ECAT Non-Operational Test (Vers. 2.0) - 93 lines
KEESECAT5.FUL97	Keesler RAW ECAT Non-Operational Test (Vers. 5.0) - 97 lines
KEESPERS.FUL	Keesler Personal Data

^a This table presents file names and descriptions for data collected from Keesler AFB. Only the first part of names change for comparable data files from Fort Knox (KNOX), Fort Sill (SILL), and Fort Benning (BENN).

UNIFORM ECAT DATA REFORMAT

NPRDC requested that RGI reformat all versions of ECAT into a uniform, 97-record version, including some additional calculated variables. This section describes the reformatted ECAT data files.

ECAT Version 5.0 served as the template for the reformat. With this in mind, data base personnel first reformatted Subtest Headers and Subtest Summary Lines. We standardized Subtest Headers across all test versions and added the ECAT Raw Data Version No. and Beginning Test Date to the Header. For Subtest Summary Lines, we standardized the lines across all test versions. Also, where item level data were available, we calculated all Proportion Correct variables using only non-practice subtest items, instead of all attempted subtest items, as in the Raw ECAT versions.

Next, RGI reformatted the Sequential Memory (SM), Integrating Details (ID), Mental Counters (MC), Target Identification (TID), and One and Two Hand Tracking (TR1 and TR2) subtest data. Between Version 2.0 and later versions of ECAT, NPRDC relocated, but did not change, SM subtest items. RGI data base personnel relocated Version 2.0 SM items in the ECAT data analysis file as indicated in Table 2. In addition, we modified the SM subtest Accuracy Variable for each item across all SM subtest versions to indicate the number of digits correct. In previous versions a flag indicated whether or not all digits were correct for the item. Also, we modified the Proportion Attempted Variable on the Subtest Summary Line to reflect a correct range of 0.000 to 1.000, instead of 0.000 to 5.000, as before. Furthermore, RGI added two new variables to the Summary Line: Proportion of Digits Entered Correctly and Proportion of Subtest Items with all 5 Digits Correct. Finally, in the Data Analysis reformat of the Version 2.0 SM subtest, Item Response Latencies are missing since the Version 2.0 software does not save

that variable.

For the ID subtest, RGI changed the Subtest Header to reflect the total number of Quick Response Flags (both Integrate and Decision Times) for all items. We also changed the Mean Reaction Variables from arithmetic means to geometric means for Integrate Time and for Decision Time. We calculated the geometric means as follows: $\text{antilog} (\Sigma(\log(\text{Dec.or React. Time})) / n)$

Across all versions of the MC subtest, RGI changed the range of Item Responses from 0 - 3 to 1 - 4. Also, In the Data Analysis reformat of the Version 2.0 MC subtest, Item Response Latencies are missing since the Version 2.0 ECAT software does not save that variable.

For TID subtest summary values, RGI based all the values on 36 "pre-scored" actual items, instead of 39 (3 practice + 36 actual) items. RGI used the following procedure to "pre-score" items:

- (1) An item "time out" flag causes an "item incorrect" score.
- (2) For the Item Decision Time variable is less than 1.00 (100 msec.), we set the item to missing.
- (3) For the Item Response Time variable is less than 0.10 (10 msec.), we set the item to missing.
- (4) The reformat procedure does not consider Decision Time and Response Time values for calculations for any item flagged as incorrect or missing.

After "pre-scoring", the reformat procedure obtains the Median Decision Time variable and the Median Response Time variable of all valid (non-missing) items and calculates the Proportion Correct variable from all non-practice subtest items. All recalculated variables appear in the Subtest Summary line.

Finally, for TR1 and TR2 subtests, where possible, RGI based all calculations on 18 actual items, instead of all 24 subtest items (3 practice items, 3 "real" but unscored items, and 18 actual items). We also included a new variable, Standard Deviation of Avg. $\log*1000 + 1$ of RMS for valid items, in the Subtest

Summary Line. No data were available for recalculation of the Average RMS variable, which is based on all 24 subtest items. Therefore, data base personnel transferred the Average RMS variable directly from the Raw ECAT Version to the reformatted version.

DATA ORGANIZATION

Data base personnel separated all versions of ECAT administered during this study into version-specific files then reformatted all versions into a uniform, 97-record version. Next, they organized the reformatted data into 4 files for Fort Knox and 5 files for Keesler AFB, Fort Sill, and Fort Benning. They then copied these files to three tapes in the NPRDC Tape Library and made a copy of each tape. The tape User Name is Moreno and the Volume Description is RGI. The tapes are 9 track with a density of 6250 (bpi) and are in the EBCDIC format. Table 3 presents the file formats for these tapes. The first column in these tables indicates the NPRDC Tape Library number, the second column indicates the name of the file, and the third column indicates its position on the tape. Columns 4 through 6 contain the record length, the block size, and the blocking factor, respectively. The seventh column presents the number of records in the file, and the last column indicates the number of examinees in the file.

Table 3

List of File Formats for the Data Tapes

Tape Number	File Name	File Number	Record Length	Block Size	Blocking Factor	Number of Records	N
1489 & 1508 a							
	KEES.MERGE	1	80	4800	60	103752	1048

Note. Data collection problems required RGI to blank-fill certain records for examinees for whom there are either no data or irregular data. The footnote below indicates where this occurred. RGI will deliver irregular data for these examinees under separate cover.

^a KEES.MERGE has 11 ECAT blank-filled records.

^b KNOX.MERGE has 93 ECAT blank-filled records.

^c BENN.MERGE has 28 ECAT blank-filled records.

^d SILL.MERGE has 18 ECAT blank-filled records.

DATA FORMATS

This section begins with an overview of the record layout tables. The last two sections describe the merged data file and the two raw ECAT data files.

Overview of Record Layout Tables

Tables for each type of file document the COLUMN NUMBERS, the VARIABLE FORMAT and DESCRIPTION, and the VALID RANGES and VALUES. The FORMAT heading uses the following standard notation:

"<type> <size>"

where <type> is one of:

I	for Integer Data
F	for Floating Point Data
A	for ASCII Data

and <size> describes the length of the field. Note that in the format "F 7.3", the "7" refers to the total length of the field *including the decimal point*, and the "3" refers to the number of digits *after* the decimal point, for example: "123.456". An optional repetition factor may precede the FORMAT:

"<count> <type> <size>"

for example:

3 (I 2)

indicates that the field "I 2" (a 2-digit integer field) occurs 3 times.

All ECAT record layouts use the following abbreviations for ECAT subtests:

<u>Test Name and File Order</u>	<u>Abbreviations</u>
Sequential Memory	SM
Spatial Reasoning	SR
Integrating Details	ID
Assembling Objects	AO
(Spatial) Orientation	OR
Mental Counters	MC
Target Identification	TID
One-Hand Tracking	TR1
Two-Hand Tracking	TR2

One or more BLANKs separate most data fields. Since the end of one field and the beginning of another imply BLANKs, this report does not include explicit descriptions of the BLANK fields unless needed for clarity.

Data Analysis Files

Tables 4 and 5 provide a description of the merged data analysis file for examinees who took the ECAT at one of the military bases (eg. KEESLER.MERGE). Table 4 describes records 1 and 2, personal data, while Table 5 describes records 3-99, ECAT data. A sample case of the merged data analysis file appears in Appendix C. It may be beneficial to follow along with these data when reviewing the field descriptions in Tables 4 and 5.

Raw ECAT Files

Table 6 provides a description of the 93-record Version 2.0 ECAT file for examinees who took ECAT at the beginning of the study. For example, all Keesler examinees through 11 March 1991 completed ECAT Version 2.0, and the filename for this data is KEESECAT2.FUL93. A sample case of the Version 2.0 ECAT appears in Appendix D. It may be beneficial to follow along with these data when reviewing the field descriptions in Table 6.

Table 7 provides a description of all 97-record versions of ECAT administered to examinees at the end of the study. For example, all Keesler examinees after 11 March 1991 completed ECAT Version 5.0, and the filename for this data is KEESECAT.FUL97. A sample case is included in Appendix E. It may be beneficial to follow along with these data when reviewing the field descriptions in Table 7.
